

Customer Success Story:

The Atrium at Jacksonville, Florida

When The Atrium at Jacksonville, an assisted and independent living community in Florida, needed interior renovations, they called **Coastal Reconstruction** – a general contractor with extensive remodeling experience.

- Because the community was occupied, Coastal had to adhere to a strict schedule and could be on-site only between the hours of 8:00 p.m. and 6:30 a.m. For the residents' safety, the work site had to be cleared each morning — no tools or debris could be left behind.
- To update the common areas, the scope of the job included stripping wallpaper, texturizing and painting every wall, removing and adding walls to form new floor plans, adding central heat and air conditioning, recarpeting, replacing windows, and building a nurses' reception station.
- The entire 300,000-sq.-ft. project was finished within six months and completed in stages in order not to disrupt the daily routines of the residents.

"Coastal was able to completely work around The Atrium's operations schedule — which is critical for a facility like ours. In addition, they updated a work calendar daily, which allowed us to keep our residents informed of the progress, making the communication process seamless."
